- Data source: googleplaystore.csv && googleplaystore_user_reviews.csv
- Tools Used : Excel(power query , power pivot).

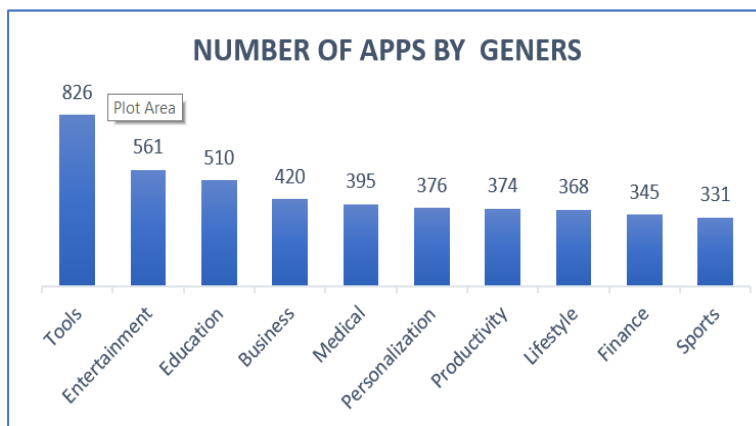

Data Analysis:

- 1- What is the most expensive apps in the store.

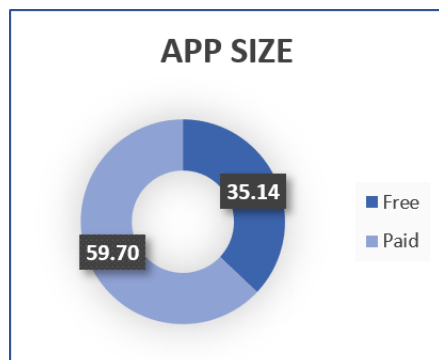

Insight: “I Am Rich” is the most expensive app on the Play Store, with its various editions (“I Am Rich Plus ” “I Am Rich Trump ”) also ranking among the top five highest-priced offerings.

2-Which Genre has more apps?

Insight: “The Tools genre” hosts the most apps, followed by Entertainment and Education, with all other genres trailing behind.

3-What is the average size of free & paid apps.

insight: Paid apps constitute 59.70% of the Play Store, outnumbering free apps at 35.14%, with the remaining apps falling into other pricing tiers or promotional categories.

4-What is the top expensive apps that have rate 5.

Row Labels	Sum of Price	Average of Rating
AP Art History Flashcards	30	5
USMLE Step 2 CK Flashcards	20	5
meStudying: AP English Lit	5	5
Hey AJ! It's Bedtime!	5	5
TI-84 CE Graphing Calculator Manual TI 84	5	5
Hey AJ! It's Saturday!	4	5
AC DC Power Monitor	3	5
FHR 5-Tier 2.0	3	5
Super Hearing Secret Voices Recorder PRO	3	5
ADS-B Driver	2	5

insight: AP Art History Flashcards stands out as the most expensive app among those with a perfect 5.0 rating.

5-How many apps that has more than 50k reviews.

NUMREV
1945

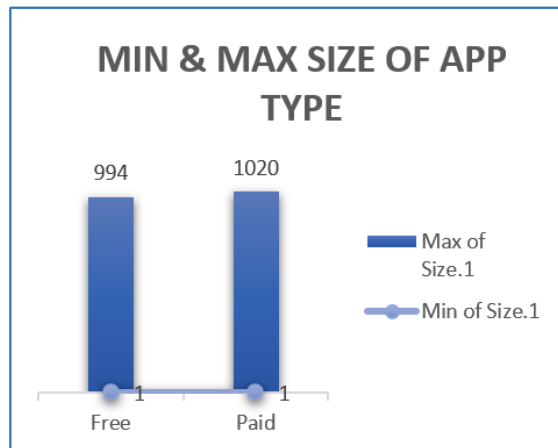

Insight: 1,954 apps have surpassed 50,000 reviews, indicating widespread user adoption and feedback(User Engagement)

6- How much google earned from the 5,000,000+ installed apps.

PRI_INST
0

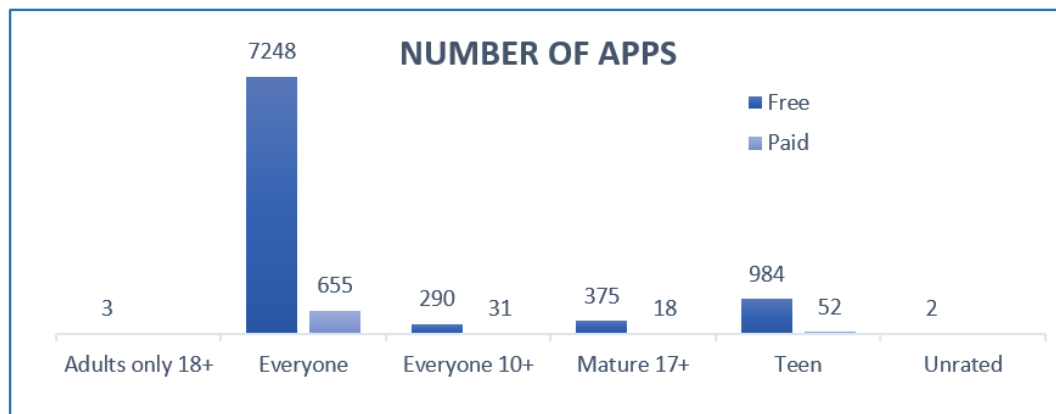

Insight: Apps with over 5,000,000 installs generated \$0 in revenue for Google, as all of these high-install apps are free.

7- What is the max and min size of free & paid apps.

Insight : Free apps range in size from 1 MB to 995 MB, while paid apps range from 1 MB to 1,020 MB, highlighting that both categories can span very lightweight to very large applications.

8- How many apps for each type of each content reading.

Insight :

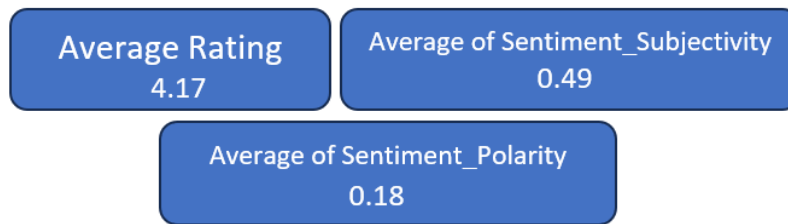

1-Everyone: 7,248 free apps, 655 paid apps.

2-Teen: 984 free apps, 52 paid apps.

9-How many apps that can work on android version 4 or more.

Insight : 6,951 apps are compatible with Android version 4.0 and above.

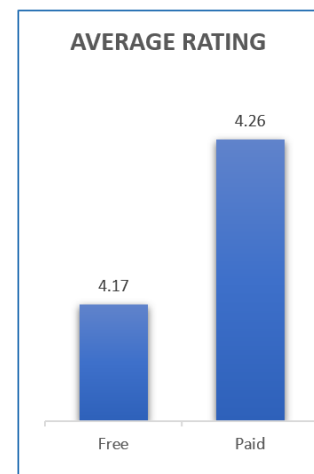

10-average for all && Average of Sentiment_Polarity && Average of Sentiment_Subjectivity ?

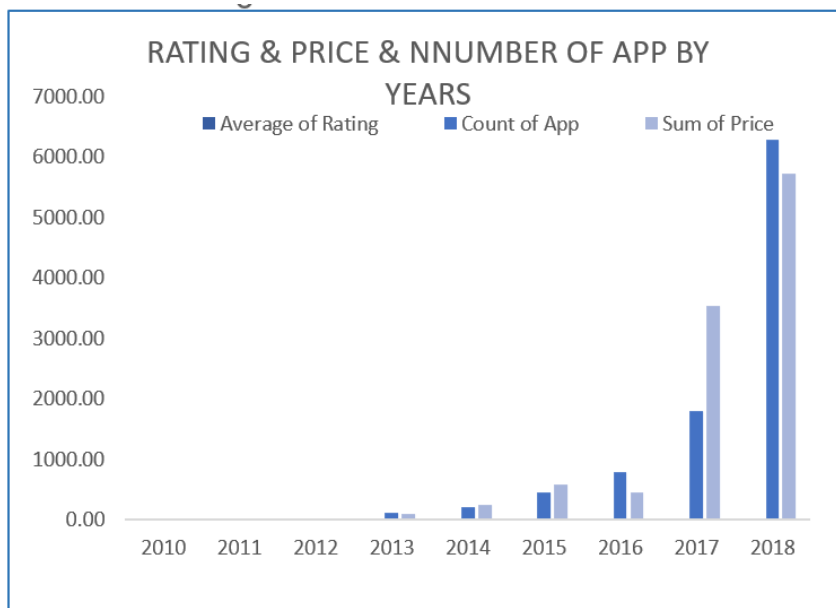

Insight : The moderate **positive sentiment (0.18)** and mid-level subjectivity (0.49) in user reviews **correspond closely with an average star rating of 4.17.**

11-average rating by type

Insight: There is no significant difference in average ratings between paid (4.26) and free (4.14) apps, indicating that payment status does not strongly influence user-perceived quality.

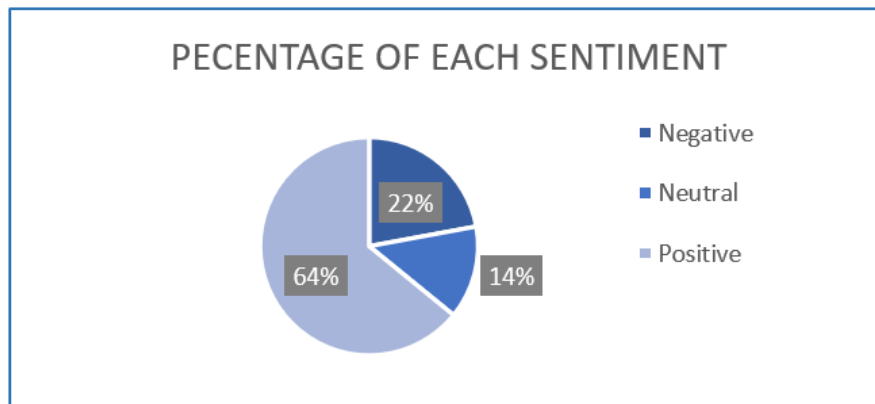

12-Rating & Price & Number Of App by Year.

Insight: Across the eight-year span, **2018 leads on all three fronts**—average rating, average price, and total app count—followed in descending order by 2017, 2016, 2015, and finally 2010.

13-Percentage of Each Sentiment.

Insight : The majority of user reviews are positive.

Recommendations:

- 1- Since top-rated apps (>4.7) cluster in the mid-price range rather than at the very high end, consider positioning new paid offerings around that sweet spot—too high a price risks limiting your audience without guaranteeing better ratings.
- 2- In crowded genres (Tools, Entertainment, Education), offer a free base with paid add-ons to boost adoption.
- 3- Aim for ≤50 MB for initial installs, then load extra content on demand.
- 4- Highlight Positives: Surface the 64% positive comments in marketing.
- 5- Engage Neutrals: Prompt neutral reviewers (14%) for more details—use quick polls in-app.
- 6- Fix Negatives: Triage the 22% negative feedback into bugs vs. feature gaps and address the top two issues first.
- 7- Focus on “Everyone”: Since 7,248 free and 655 paid “Everyone” apps dominate, ensure family-friendly features and clear value.
- 8- Support Android 4.0+: Maintain compatibility down to API 14 to cover 6,951 apps’ install base.
- 9- Post-2018 Focus: With 2018 peaking in ratings, price, and volume, now prioritize retention (in-app events, loyalty rewards) over sheer new releases.

10-seasonal Launches: Align major updates with key periods (e.g., back-to-school for Education, holidays for Entertainment).

“This report gives a clear view of the Google Play Store, showing which apps perform best, what users prefer, and how app types and prices affect success. Key findings include the most expensive apps, top-rated apps, and trends in user reviews and installs.

Based on these insights, we shared easy-to-follow recommendations to help improve app quality, increase downloads, and boost user satisfaction.

Overall, understanding this data can help developers and businesses make better decisions and create more successful apps in the future”
